Subject: Cat Canyon AE

Hi Jerry,

I had some comments on the version you sent to us in December. I have not had time to see if I would have the same questions on the new materials, but since George sent his comments to you, I thought I should send these few notes along right away. Additionally, should the exemption be approved there will be a spreadsheet that will need to be completed for our HQ. They are tracking all AEs, using this spreadsheet so they can map in GIS. I will forward the spreadsheet and data tracking form to you next so you are aware of what would be required.

Sincerely,

Michele

1. The request looks to be just an expansion of the 1974 "Cat Canyon Oil Field" boundaries. However, from the map provided with the submittal it is not clear if there are injection wells already operating in these areas. Please clarify and include a legend that defines all the symbols used on the maps.
2. On the figures there is a demarcation of a "1992 Boundary" - what is this? Is this demarcation important to the exemption request?
3. One map depicts "Aquifer Exempt Freshwater Wells". What are these?
